a 100 metric ton thrust rocket engine		3 5 (	, a s T			7
it was common knowledge among the German specialists in Podberezye, that a Dr. SCHERER of the Siebel group to do with the design of missile rocket engines for a two stage missile design having four separate rocket engine combustion chambers in the boosting stage. This was sometime in 1950.  Dr. SCHMITZ, who is still in the USSR, prepared the performance curves on this project. The project lasted several months and was suddenly taken away from the Germans engaged in it.	•		2 -			50X
